

//Methods

```
package com.dl.one.modifiers.methods;
```

```
public class Eg1 {
```

```
    public void m1() {
```

```
        System.out.println("M1 Public Method");
    }
```

```
    protected void m2() {
```

```
        System.out.println("M2 Protected Method");
    }
```

```
    void m3() {
```

```
        System.out.println("M3 Default Method");
    }
```

```
    private void m4() {
```

```
        System.out.println("M4 Private Method");
    }
```

```
    public static void main(String[] args) {
```

```
        Eg1 eg1 = new Eg1();
```

```
        eg1.m1(); // public method from same class accessible
        eg1.m2(); // protected method from same class accessible
        eg1.m3(); // default method from same class accessible
        eg1.m4(); // private method from same class accessible
    }
}
```

```
package com.dl.one.modifiers.methods;
```

```
public class Eg2 extends Eg1 {
```

```
    public static void main(String[] args) {
```

```
        Eg2 eg2 = new Eg2();
```

```
        eg2.m1(); // default method from another class / same package accessible
        eg2.m2(); // public method from another class / same package accessible
        eg2.m3(); // default method from another class / same package accessible
        //eg2.m4(); // private method from another class not accessible
    }
}
```

```
package com.dl.two.modifiers.methods;
```

```
import com.dl.one.modifiers.methods.Eg1;
```

```
//Note:
```

```
//we cannot call any method directly from one package to another package
//we need to import the package to access another package methods
```

```
public class Eg3 extends Eg1 {
```

```
    public static void main(String[] args) {
```

```
        Eg3 eg3 = new Eg3();
```

```
        eg3.m1(); // public method from import package available
        eg3.m2(); // protected method from import package available
        // eg3.m3(); // default method from import package not available
        // eg3.m4(); // private method from import package not available
    }
}
```

public and protected modifiers
for protected we use inheritance

//Methods

```
package com.dl.test;
```

```
public class Addition {
```

```
    protected int addTwoNumbers(int a, int b) {  
        return a + b;  
    }
```

```
    public int addThreeNumbers(int a, int b, int c) {  
        return a + b + c;  
    }
```

```
}
```

```
package com.dl.test.one;
```

```
import com.dl.test.Addition;
```

```
public class TestOne extends Addition {
```

```
    public static void main(String args[]) {
```

```
        TestOne obj = new TestOne();
```

```
        System.out.println(obj.addTwoNumbers(10, 20)); // 30
```

```
        System.out.println(obj.addThreeNumbers(10, 10, 10)); // 30
```

```
    }
```

```
}
```

```
}
```

//Methods

```
package com.dl.test;
```

```
public class Addition {
```

```
    public int addThreeNumbers(int a, int b, int c) {  
        return a + b + c;  
    }
```

```
}
```

```
package com.dl.test.two;
```

```
import com.dl.test.Addition;
```

```
public class TestTwo {  
    public static void main(String[] args) {
```

```
        Addition a = new Addition();  
        System.out.println(a.addThreeNumbers(10, 20, 30)); // 60  
    }
```

```
}
```
